Remote Backup

Offsite, Encrypted Data Backup for Primary Schools

Teacher and pupil
work backed-up

Unlimited data
storage*

CMIS & SIMS data
backed up

24-hour file
restoration

48 hour server state
restoration

Safe and secure
transfer and storage

With Service Level
Agreement (SLA)

*Fair Use Policy Applies

Peace of mind

Be safe in the knowledge that your pupil and teacher files are backed up on a daily basis. Not only do we backup data (files and folders), but also server states. This enables us to quickly restore your server in case something happens. We backup old versions of files so if you accidentally save over a file we can quickly restore it, no hassle!

Get back to teaching

Server downtime can really dent your ability to teach ICT. With our backup service we minimize downtime by providing quick access to your data and the quickest possible way of restoring your server state.

Unlimited* safe and secure storage

Unlimited data storage gives you unlimited peace of mind. If your school saves lots of work we will still back it up - we feel that's how you would like it, so that's how it is.

Your data is stored on the BLN, encrypted during transfer and always password protected.

Save over £200 a year on tapes

Tapes are a thing of a past, every year they need replacing and very frequently fail on restoration. This can be a nightmare as it can cripple your teachers' ability to teach ICT for weeks. As you will no longer need tapes, you will no longer require a tape drive - this will save in costs of up to £600 when purchasing a new server.

Be green, please?

Using tapes as a disposable item is no good for the environment, we believe remote backup truly helps the environment and means we are using the Bradford Learning Network for the purpose it was designed for.
